Outline

- The Dutch Agricultural Miracle
- The hidden costs of feeding the world
- Impact agricultural activities on One Health Triangle
 - Environment
 - Animal health
 - Human health
- The Dutch Farm Crisis
- The Way forward; what can we do?

Agriculture in The Netherlands: some facts and figures

Agri-Food export figures 2017

Total export from the Netherlands
€ 101 billion

Top 5 export products

Materials and technology
€ 9.1 billion

Flowers € 9.1 billion

Dairy and eggs € 8.9 billion

Meat € 8.3 billion

Vegetables € 6.7 billion

Top 3 destinations

	Germany	24.7%
	Belgium	11.2%
	United Kingdom	9.2%

- The Netherlands is the EU's biggest agri-food exporter
- And the second biggest in the world

Source: Nov & Dec 2017 estimates, Wageningen University & Research/Statistics Netherlands

Humans and Livestock in NL:

Human Population Netherlands
2021: 17,295,000

Population Density: 509,3
inhabitants/square km (highest of
EU countries after Malta)

How many farm animals in the Netherlands?

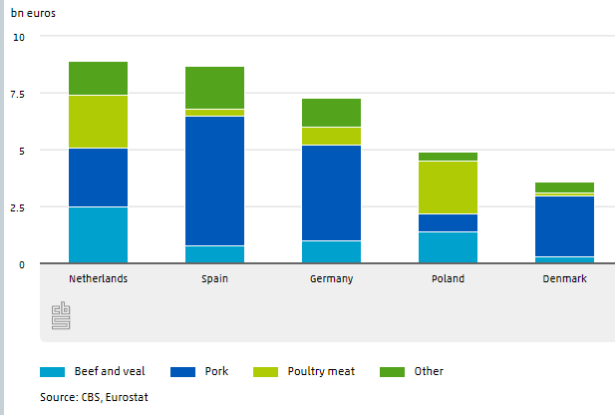

Total livestock density, 2016 (livestock units per hectare utilised agricultural area)

Feeding the World

Largest meat exporters in the EU, 2020

Export value of live animals, 2020

Distribution of skim milk powder exports from the Netherlands in 2021, by destination

High Agricultural Productivity in The Netherlands: the keys?

- Efficient production systems and processes: high input/high output
- Fertile soil, high use of fertilizers and pesticides
- Import of animal feed/soya beans
- Use of (cheap) natural gas for heating the greenhouses
- Cheap manual labor from migrant workers
- 'Research and Development: Wageningen University; seed companies
- 'Silicon Valley of Agriculture'
- Important driver of growth and development
- Stimulated and facilitated by Dutch Authorities and EU: production maximalization, never ending consumption driven grow *that cannot be sustained due to biophysical limitations*
- *Neglect of considerable environmental and social trade offs*

High Agricultural Productivity in The Netherlands: at what price?

- Aspects of One Health Triangle; impact on:
 - Environment
 - Animal Health
 - Human Health
- Hidden costs:
 - Animal disease cost and controls
 - Restoring and control of environmental pollution
 - Drinking water purification
 - Maintenance of basic facilities in abandoned rural areas

One Health at risk:

Environment

Animal Health

Human Health

Impact of Agriculture on the Environment

Greenhouses: 10.000 ha

Greenhouses: impact on landscape and light pollution

Use of energy for heating and lighting and pollution by pesticides and nutrients are major known problems

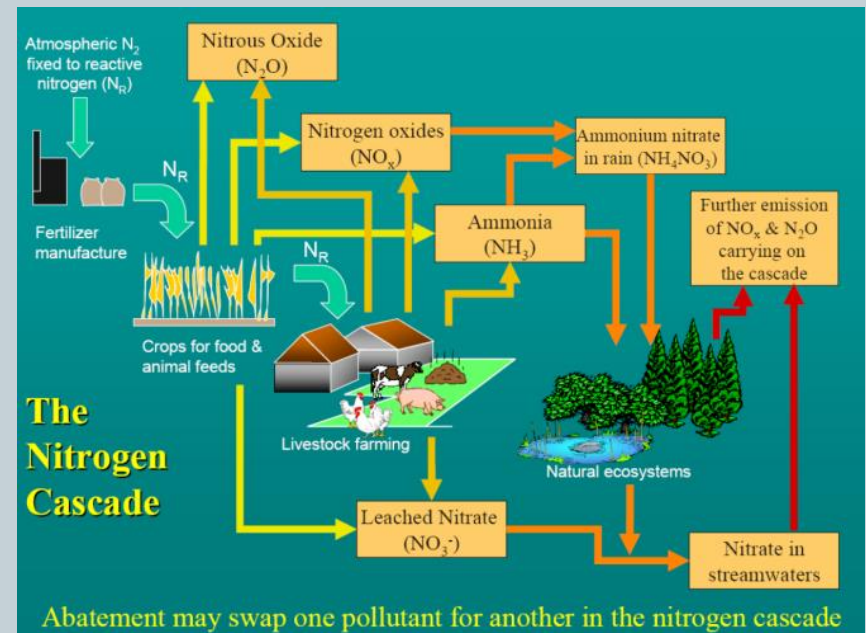

Impact of Agriculture on the Environment

- **Nitrogen deposition:**
 - Manure surplus
 - Exceeding the limits (Nitrate Directive)
 - Import of animal feed and fertilizers

Greenhouse gas emissions from animal farming account for 17% of the EU's total, the equivalent of 704 million tonnes of CO₂ and 'more than all cars and vans put together' (FAO)

Environmental standards have not been met (Water Framework Directive)

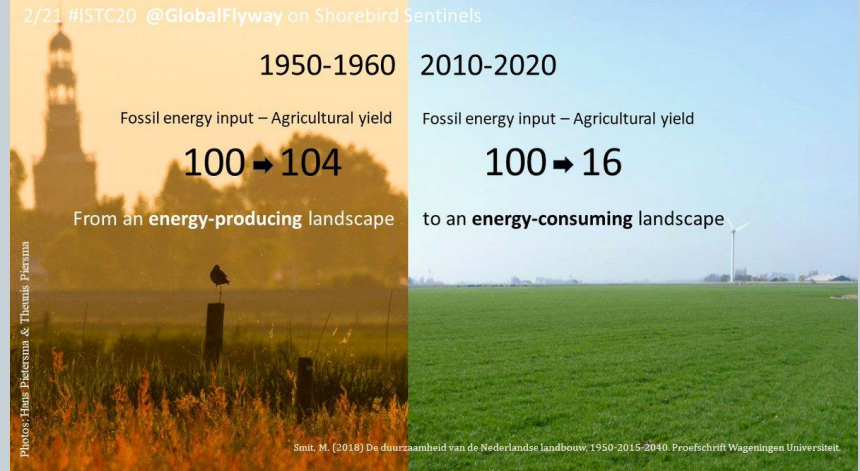

Loss of biodiversity / ecological heterogeneity

Country Report for The State of the World's Biodiversity for Food and Agriculture – The Netherlands

Development of biodiversity

Dehydration and Salinization

- Drainage for lowering of groundwater level for agriculture is organized to allow heavy equipment to drive out and does not sink away
 - Leads in low-lying grassland areas on peaty soils in North and West Netherlands to lowering of land and decrease of plant, bee and bird species
- The Rhine is now so low that it will hinder trade.
- Low fresh water supply enables salinization of arable land in coastal areas

The Rockefeller Foundation–Lancet Commission on planetary health

Safeguarding human health in the Anthropocene epoch: report of The Rockefeller Foundation–Lancet Commission on planetary health

DAMAGING THE PLANET DAMAGES HUMAN HEALTH

CLIMATE CHANGE

If unchecked climate change related impacts could cause an extra

250,000

deaths per year

between 2030 and 2050¹

BIODIVERSITY LOSS

Overfishing together with increasing acidity and other environmental changes threaten fish supplies

UNDER NUTRITION

Millions of people are at risk of under nutrition due to the combined effects of

climate change and other environmental changes

WATER USE

By 2050 over

40%

of the world's population could be living in areas under severe water stress

SOIL DEGRADATION

This leads to a loss of

1-2

million hectares of agricultural land per annum

Impact of Agriculture on Animal Health

- Animal welfare
- Animal transport
- Zoonoses

Transport to Italy and Spain for production of Salami or Chorizo

Zoonoses from Intensive livestock farming

News

Bird flu at poultry farms in 2021/2022

In 2003, a thousand people became infected with bird flu and a vet died

2021 570.000 mink culled;

Bird flu found on more Dutch farms, 220,000 chickens are culled

Business     January 24, 2022

Q-fever in The Netherlands 2007-2010

- > 4000 patients with Q-fever (laboratory confirmed)
- 600 hospitalized
- 11 patients died

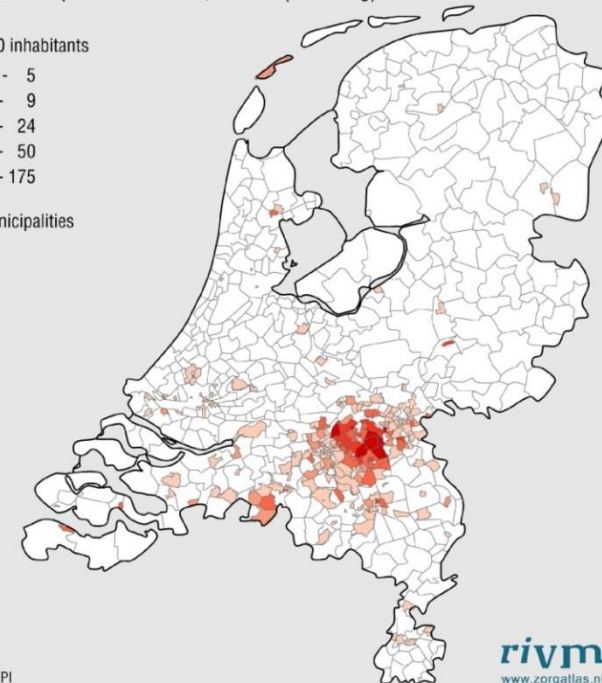

- Connection dairy goats-humans:
 - Epidemiological findings

Goats in The Netherlands

Increase after swine fever epidemic in 1997
Transition of Pigfarms into goat farms.....

‘Poor men’s cow’

1995: 76.000

2009: 375.000

**(3.000 goat farms
Herds 600-7000)**

Probable causes of the outbreak

- Strong increase in the number of dairy goat herds and goat numbers
- Influenced in-herd dynamics of *Coxiella Burnetii*?
- Introduction of a more virulent strain or genetic shift to a more virulent strain?
- Lack of basic hygienic measures: birth remnants were not destroyed but processed as manure
- Too many animals in a densely populated country

The Dutch Q fever situation lessons learned?

November 19, 2013

One Health Summit 2013

Hendrik-Jan Roest, CVI, Lelystad, NL

Kitty Maassen, RIVM, Bilthoven, NL

Arjen van de Giessen, RIVM, Bilthoven, NL

Fred van Zijderveld, CVI, Lelystad, NL

Q-fever epidemic in The Netherlands

Lessons learnt, wake-up call

- The risk of outbreaks of zoonoses is increasing: intensive livestock farming , increased mobility, animal transport.
- Better preparedness: awareness, education, hygienic measures
- Share information
 - In the human medical chain
 - In the veterinary chain
 - Human ↔ Veterinary
- One Health approach:
 - people, animals and the environment are recognized as being interconnected and integrated approaches are practiced for understanding, maintaining and improving the health of all

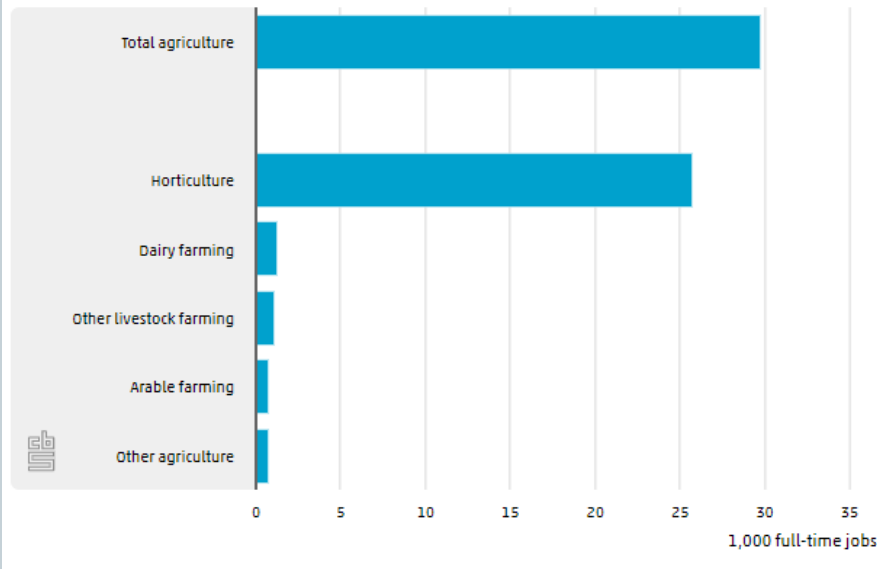

Agriculture Workers Health

- Issues of concern:
- Long-term effects of pesticides / M. Parkinson
- Antibiotic resistance
- Farm dust lung diseases
- Migrant workers health
- Mental Health: depression, suicides, agitation

Migrant Workers in Dutch Agriculture

June 2016

Flexibilisation of labour relations and the (lack of) stricter legal regulation

Labour exploitation and unacceptable working conditions for migrant workers in the Netherlands

"Sneller, sneller, sneller,' and 'faster, faster, faster,' that is my entire Dutch and English vocabulary", said one of the interviewed workers.

"The owner of the greenhouse where I was employed introduced a competition "He put a list with the names of all workers on the wall. They were ranked in phases according to their productivity. When someone was in the orange phase for a couple of days he would be fired.

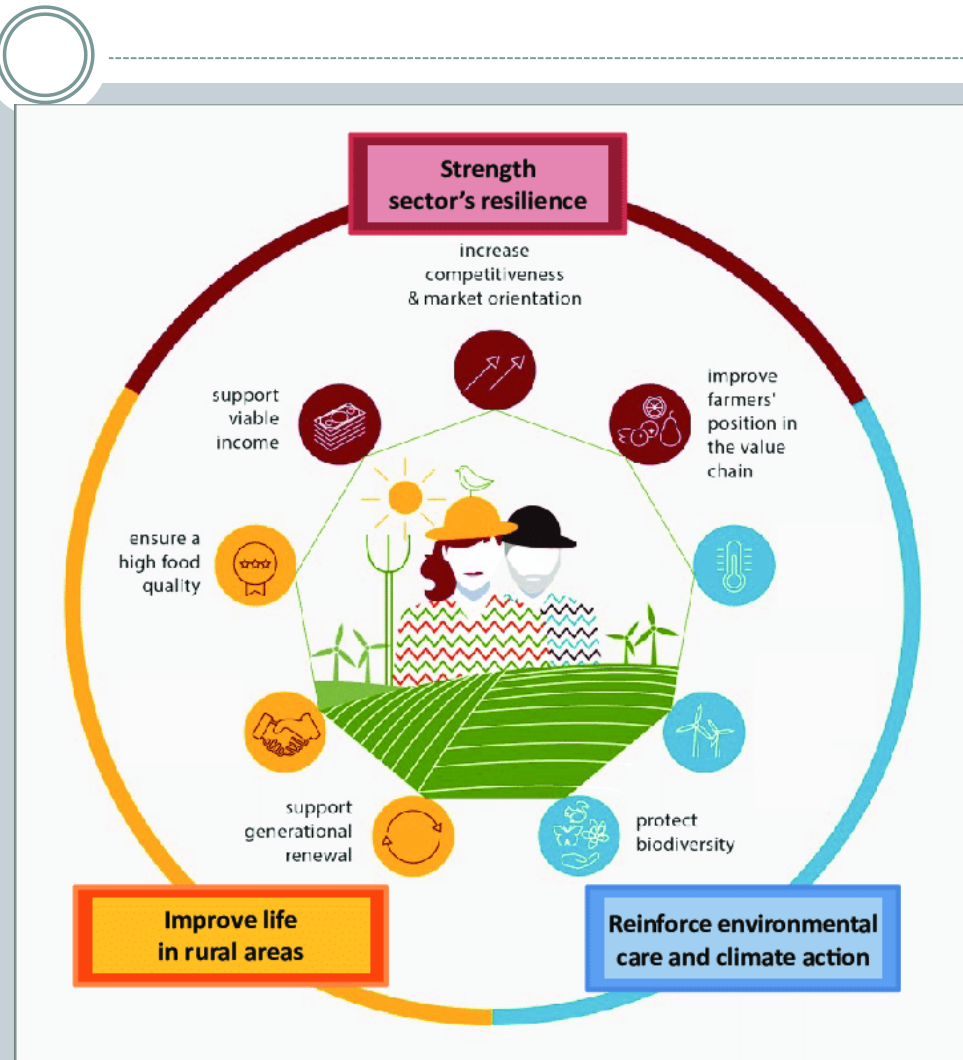

The Netherlands Farm Crisis

- Weak governance to address Nitrogen Issue
 - Farms cause 85 percent of ammonia emissions and 40 to 45 percent of overall nitrogen emissions.
 - Until 2019, the government was essentially hoping that the problem would go away on its own. Some farmers would retire. Others would be forced out of business by competition or reduced demand for animal products. Others yet would invest in technologies that capture or reduce ammonia emissions.
 - That year, the Council of State, the Netherlands' highest administrative court, ruled that more needed to be done. Government's plan to cut nitrogen emissions in half by 2030. As a consequence reduction of the livestock is needed and one in three Dutch farms may need to close.
 - The idea Green deal that agriculture is more than efficient food production comes slowly; top down decisions are taken too late

Green Deal impact on Agriculture

- **Farm to fork strategy**
 - Making the EU food supply chain from farm to fork more sustainable: for a fair, healthy and environmentally friendly food system
- **Resistance to Change**
- **Farmers protests**

Radical Farmers protest

WORLD IN DEPTH

Trump and co rally to Dutch farmers' side in fight against climate change laws

The Netherlands is polarised by environmental legislation that aims to cut damaging emissions but also threatens to put 11,000 farms out of business. Bruno Waterfield reports

Keys to Agricultural Workers Health

Keys: **Global level:** achieving a net-zero carbon economy: technology, finance, knowledge

UN Sustainable Development Goals : 'Free the human race from the tyranny of poverty and want and to heal and secure our planet'

BUT: 'The American way of life is not up for negotiation'(George Bush)

AND: 'Environment cannot be improved in conditions of poverty' (Indira Gandhi)

What we can do as OHS professionals to improve agriculture workers health?

education, education, education?

Keys to Agricultural Workers Health

- **Education and training**
 - Chain Approach (Erik Jors):
 - Community Approach (Susan Brumby)
 - WIND (Work Improvement in Neighbourhood Development) programme agriculture (ILO)
- **Collaboration**
 - One Health Approach, Connectivity
 - BOHS approach
 - Overcome professional territorialisme
- **Regulation**
- Develop robust measures and precautionary actions: *regulation of OHS is a public task and requires active and alert authorities*
 - ‘Harmfull Inertia’.
 - Competent authorities /Labour Inspectors

Keys to Agricultural Workers Health

- Chain Approach (Erik Jors):
- Community Approach (Susan Brumby)
- One Health Approach
- BOHS approach (occupational health through primary and community health care)
 - Importance of Secondary Support System: Knowledge and Referral Centres
 - Research and Development
 - Education and Training
 - Connectivity

Chain approach: Pesticides Program Uganda

- Training integrated pest management in local communities
- Training sellers of agrochemicals on safety issues
- Training applicators of pesticides for vector control
- Awareness raising of pesticide poisoning in local hospitals
- Influencing national regulations
- Stimulating National Poisoning Information Centre
- Exchange of PhD students from Kampala and Aarhus
- Evaluation
- Sustainable funding by DK
- Run by Eric Jors: sowing seeds of hope..

Safe work with pesticides: preventing AOPI

- **Authorisation of Plant Protecting Products**
 - National and EU-level (specific circumstances in different areas)
 - Prescription of formulation (fluid, granule, powder)
- **Education and training**
 - Certificate of competence; licence to use
- **Technology**
 - Automatization of spraying in greenhouses
- **Protection**
 - Personal protection, re-entry times
- **Control**
 - Strict inspections, enforcement,
 - Residue control (market correction)
 - [AOPI: Acute Occupational Pesticide-related Illness]

Community approach (Susan Brumby)

AGRICULTURE

Occupational Safety and Health in Agriculture- The BOHS Approach

Prepared in Public Interest

By

Indian Association of
Occupational Health

April, 2013

Safety Culture and Risk Management in Agriculture

Call for measures to be implemented in the New EU Common Agricultural Policy:

Measures:

- Integrate occupational safety and health (OSH) into EU agricultural policies.
- Establish a European network for agriculture safety and health.
- Allocate specific funding for agriculture OSH research in Horizon 2020
- Develop and implement OSH education and skills programmes for farmers and workers in the agriculture sector.
- Improve statistics to reflect the true level of agricultural accidents and OD's

COST is supported by the EU Framework Programme Horizon 2020

Short Course for Primary Health Care

WORK AND HEALTH
IN AGRICULTURE
for primary health care

Foundation
Learning and Developing Occupational Health

Short course for Primary Health Care

Work & Health in Agriculture

Maarten Verberk, Frank van Dijk, Gert van der Laan, Mieke Lumens, Ad de Rooij

- **All materials for a 3-4 day course, freely available**
- Fits into the approach of Basic Occupational Health Service (BOHS)
- Course participants: physicians, nurses, community health workers who want to learn BOHS for workers in agriculture
- Author: Netherlands foundation Learning and Developing Occupational Health (LDOH)

<https://ldoh.net/>

LDOH invites a team that is interested to:

- ▶ Use the course for training the professionals in their region; adaptation possible to local insights and agricultural practices

Elements of the course

1. Activities of BOHS
2. Workplace evaluation
3. Respiratory diseases
4. Skin diseases
5. Musculoskeletal diseases
6. Zoonotic diseases
7. Mental disorders
8. Chemicals & pesticides
9. Physical factors
10. Accidents
11. Personal protection
12. Networking in BOHC
13. Information resources
 - Training in teaching skills

Impact Climate Change on Workers Health

ANSES Opinion
Request No 2013-SA-0216

The Director General

Maisons-Alfort, 24 January 2018

OPINION
of the French Agency for Food, Environmental
and Occupational Health & Safety

on the “Assessment of the risks to worker health posed by climate change”

Occupational Risks due to Climate Change

- Increase in Temperature
 - Discomfort, dehydration, heat strokes, psychosocial risks (impaired alertness, violence)
- Alteration of Biological and Chemical Environment
 - Inhalation of volatile substances, alteration of spatial range of vectors of infectious diseases
- Extreme Weather Events
 - Flooding, submersion, summer droughts, forest fires

Impact of Climate change is unevenly distributed geographically and agricultural and construction workers are expected to be the most affected.

Review

Impacts of Climate Change on Outdoor Workers and Their Safety: Some Research Priorities

Haruna M. Moda ¹, Walter Leal Filho ^{2,*} and Aprajita Minhas ²

Int. J. Environ. Res. Public Health 2019,
16, 3458

Table 3. Health Impacts of Urban Heat Island (UHI) on Outdoor Workers.

Health Impacts	Author & Year
Heat exposure	
• Heat Stress/Stroke	Leal Filho et al. [48]
• Fatigue	Ward et al. [43]
• Dehydration and Kidney Disease	Kjellstrom et al. [40]
• Cardiovascular Disease	Heaviside et al. [31]
• Respiratory Distress	Hanna et al. [42]
• Death	Tan et al. [57]
• Increase morbidity and fatality	Kovats and Hajat, [56]
Air Pollution	
• Respiratory Distress	Kjellstrom et al. [40]
• Respiratory Track Irritation	Ward et al. [43]
• Asthma Attack	Kjellstrom et al. [52]
• Increased Respiration due to Heat exposure	
• Exposure to carcinogens	
Unbalanced Physiological Function leading to decrease in work capacity	Lucas et al. [29] Lundgren et al. [24] Kjellstrom et al. [40] Kovats and Hajat, [56]
Extreme weather and sea level rise	
• High risk of flooding causing displacement	Kjellstrom et al. [52]
• Injury	McGranahan et al. [58]
• Resource disruption e.g., water supply	
Psychological effects on Workers Mental health	Kjellstrom et al. [7] Lundgren et al. [24] Hanna et al. [42] Kjellstrom et al. [52]

REVIEW

Occupational Heat Stress and Kidney Health: From Farms to Factories

Fabiana B. Nerbass^{1,2}, Roberto Pecoits-Filho^{2,3}, William F. Clark^{4,5}, Jessica M. Sontrop⁵, Christopher W. McIntyre^{4,5} and Louise Moist^{4,6}

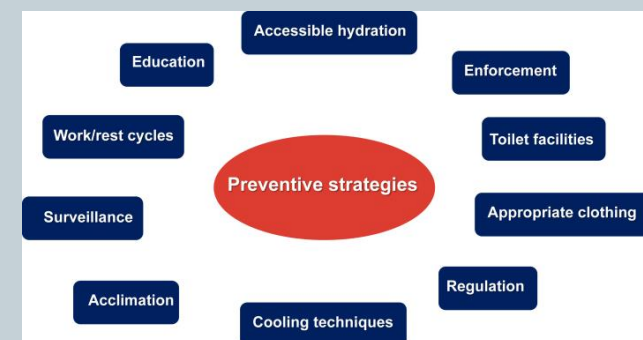

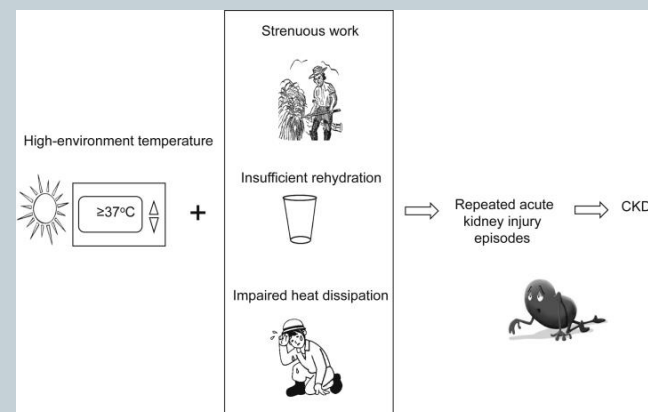

¹Nephrology Division, Pro-rim Foundation, Joinville, Santa Catarina, Brazil; ²School of Medicine, Pontificia Universidade Catolica do Parana, Curitiba, Parana, Brazil; ³Renal and Metabolic Division, George Institute for Global Health, Sydney, New South Wales, Australia; ⁴Division of Nephrology, Schulich School of Medicine and Dentistry, Western University, London, Ontario, Canada; ⁵Kidney Clinical Research Unit, London Health Sciences Centre, London, Ontario, Canada; and ⁶Department of and Epidemiology and Biostatistics, Western University, London, Ontario, Canada

Millions of workers around the world are exposed to high temperatures, intense physical activity, and lax labor practices that do not allow for sufficient rehydration breaks. The extent and consequences of heat exposure in different occupational settings, countries, and cultural contexts is not well studied. We conducted an in-depth review to examine the known effects of occupational heat stress on the kidney. We also examined methods of heat-stress assessment, strategies for prevention and mitigation, and the economic consequences of occupational heat stress. Our descriptive review summarizes emerging evidence that extreme occupational heat stress combined with chronic dehydration may contribute to the development of CKD and ultimately kidney failure. Rising global temperatures, coupled with decreasing access to clean drinking water, may exacerbate the effects of heat exposure in both outdoor and indoor workers who are exposed to chronic heat stress and recurrent dehydration. These changes create an urgent need for health researchers and industry to identify work practices that contribute to heat-stress nephropathy, and to test targeted, robust prevention and mitigation strategies. Preventing occupational heat stress presents a great challenge for a concerted multidisciplinary effort from employers, health authorities, engineers, researchers, and governments.
